**Break-in Period**

The break in period serves as a gentle time period of use to allow for all working parts to work into their function. The break in period is simple, for the first 5 hours or 100 miles keep the unit at no more than half throttle and stay away from any extreme riding. Once this time period has passed, the unit should receive a similar PDI inspection that was done at the dealer to ensure no parts have become loose. If any parts need to be addressed during the PDI inspection, please take the unit to a servicing ODES USA INC. dealer for repair.

**Service Points**

Service points are crucial for unit preventative maintenance. Regular maintenance is required to maintain your warranty as you would change the oil in your normal motor vehicle. Regular maintenance is not covered under the warranty but at the cost of the unit owner. Keep records of your maintenance visits in case they are requested during warranty.
